

## RescueNet® Live Plus

# ELEVATE YOUR EMERGENCY CARE TO NEW HEIGHTS

Together, the new RescueNet® Live Plus software and the X Series Advanced® monitor/defibrillator from ZOLL provide an innovative solution that improves the efficiency of out-of-hospital care and gives both EMS agencies and hospitals a supported path into the future of telemedicine.

### Collaborate with a Click

#### Two-Way Communication

Using live audio and video, remote clinical staff can consult EMS providers in the field while they examine the patient, diagnose symptoms, and prescribe treatments en route to a hospital or receiving center.

#### Evolved Mobile Integrated Health

Enable your Smart Ambulance with the ability to integrate your plug-and-play medical peripheral devices that provide remote clinicians and connected experts with access to real-time patient examinations.

#### Enhanced Workflow Efficiency

Communications between pre-hospital providers and remote clinicians are more efficient, the decision-making process is more precise, and the receiving facility is better prepared when the patient arrives.

#### Resilient Connectivity

RescueNet Live Plus allows you to map out preferred routes based on mobile coverage strength to ensure connectivity with the strongest available signal. This enables uninterrupted communication throughout transport.
