

FREE OBSTETRIC CARE WEBINAR

Waterbirth and monitoring

Join Medidyne's free Obstetric Care webinar with focus on waterbirth and CTG monitoring in water.

Birth in water and water as pain relief during birth increases positive birth experiences. Water is valuable pain relief and has many physiological benefits.

Monitoring with cardiotocography (CTG) in waterbirth is possible, externally as well as internally, which enables women to remain in the water bath for as long as they wish if labor is normal. We will discuss the physiological and psychological benefits of water to the women and babies, contraindications of water birth and talk about monitoring during birth and how to enhance the quality of CTG in water.

You are welcome to forward this invitation and/or the registration link to colleagues or others with interest.
